

The United Nations World Water Development Report 2019

Leaving no one behind

Improved water resources management and access to safe water and sanitation for all is essential for eradicating poverty, building peaceful and prosperous societies, and ensuring that 'no one is left behind' on the path towards sustainable development.

The human rights to water and sanitation

On 28 July 2010, the United Nations (UN) General Assembly adopted a historical resolution recognizing "the right to safe and clean drinking water and sanitation as a human right that is essential for the full enjoyment of life and all human rights" (UNGA, 2010, para. 1).

Extreme poverty

- Sub-Saharan Africa
- World

Share of population living in extreme poverty

*Extreme poverty is defined as living with per capita household consumption below US\$1.90 per day (2011 PPP).

Notes: International dollars are adjusted for inflation and for price differences across countries. Consumption per capita is the preferred welfare indicator for the World Bank's analysis of global poverty. However, for about 25% of the countries, estimates correspond to income, rather than consumption.

Good Governance: The 'invisible' part of the water cycle

Takeaway messages

- Access to safe, affordable and reliable drinking water and sanitation services are **basic human rights**.
- Billions are being left behind in terms of access to water and sanitation.
- The wealthy generally receive high levels of service and often at very low price, while the **poor often pay a much higher price** for a service of similar or lesser quality.
- Ensuring that water is affordable to all requires policy recommendations tailored to specific target groups.
- Equitable access to water for agricultural production, particularly for **supplemental irrigation**, can make a difference for farmers' livelihoods.
- **Mass displacement** can strain water-related services for both existing populations and new arrivals, creating inequalities and potential conflicts.
- Investing in water supply and sanitation in general, and for the vulnerable and disadvantaged in particular, makes **good economic sense**.
- **Good governance** overcomes vested interests and exclusionary practices.

Thank you

Coda

Improved water resources management and access to safe water and sanitation for all is essential for eradicating poverty, building peaceful and prosperous societies, and ensuring that 'no one is left behind' on the road towards sustainable development.

These goals are entirely achievable, provided exclusion and inequality are addressed in both policy and practice. Otherwise, water interventions will fail to reach those most in need and who are likely to benefit most.

Table 5.1 The relative possibility of gaining selected benefits from WASH interventions, by vulnerable population group

*Due to reduced stunting, reduced illness-related absence, and higher enrolment and completion rates (especially among girls).

**Buildings and other facilities, including toilets, are often not accessible to persons with mobility limitations due to the lack of an accessible design, such as an entrance ramp, retrofitted bathrooms, or improved signage (ILO, 2017d).

***Educational gains for disabled children.

Note: The number of arrows is meant to illustrate the magnitude of the outcome expected for each population group.
